I CT and DT LTI Systems 1

1 Continuous Time systems 2
- 1.1 System definition . . . 2
- 1.2 LTI-CT systems . . . 4
- 1.3 Equilibrium . . . 4
- 1.4 Stability of equilibrium point - *Liapunov* . . . 4
- 1.5 Free and Forced Response . . . 5
- 1.6 Modes . . . 8
- 1.7 Example: a system modelling . . . 10
- 1.8 Impulse Response . . . 14
- 1.9 Stability of LTI-CT systems . . . 15
- 1.10 *Laplace* Transform . . . 16
- 1.11 Transfer Function . . . 16
- 1.12 Closed Loop Transfer Function . . . 19
- 1.13 Second Order Systems . . . 19
- 1.14 Response to a sinusoidal function . . . 21

2 Discrete time Systems 24
- 2.1 System definition . . . 24
- 2.2 Sample Data System . . . 24
- 2.3 Matrix representation . . . 25
- 2.4 Free and Forced response . . . 26
- 2.5 Stability of equilibrium point - *Liapunov* . . . 27
- 2.6 Equilibrium computation . . . 31
- 2.7 Modes . . . 31
  - 2.7.1 Real eigenvalues $\mu = 1$ . . . 32
  - 2.7.2 Complex conjugate eigenvalues $\mu = 1$ . . . 34
  - 2.7.3 Multiplicity larger than one . . . 36
- 2.8 Canonical discrete time input . . . 38
- 2.9 Impulse Response . . . 40
- 2.10 Sum of convolution . . . 41
- 2.11 *Fourier* overview . . . 42
  - 2.11.1 *Fourier*'s series - CT . . . 42
  - 2.11.2 *Fourier*'s transform - CT . . . 44
  - 2.11.3 *Fourier*'s series - DT . . . 45
  - 2.11.4 *Fourier*'s transform - DT . . . 47
  - 2.11.5 Summary . . . 48

3 CT Systems Discretization 50
- 3.1 From Continuous to Discrete . . . 50
- 3.2 Discrete oscillating functions . . . 53
- 3.3 Sampling . . . 55
  - 3.3.1 Aliasing . . . 55
  - 3.3.2 Sampling Theorem - *Nyquist* . . . 56

3.3.3 Practical maximum frequency . . . 58
3.3.4 Oversampling . . . 60
3.3.5 Anti-Aliasing filter . . . 61
3.4 Reconstruction . . . 62
3.4.1 Ideal reconstruction . . . 63
3.4.2 Zero Older Hold . . . 66
3.5 ZOH equivalent . . . 69
3.5.1 Example: Voltage controlled motor . . . 71
3.6 CT system approximation . . . 73
3.6.1 Quality of approximation . . . 74
3.7 Systems with delay . . . 76

4 Z-Transform **79**
4.1 Z-Transform . . . 79
4.2 Transform of canonic signals . . . 80
4.2.1 Dirac Pulse . . . 80
4.2.2 Step function . . . 80
4.2.3 Finite sequence . . . 81
4.2.4 Complex single side exponential . . . 81
4.2.5 Single side oscillating functions . . . 82
4.2.6 Delayed sequence . . . 82
4.2.7 Initial Value Theorem . . . 84
4.2.8 Final Value Theorem . . . 85
4.3 Transfer Function . . . 85
4.3.1 Static Gain . . . 86
4.3.2 Computing Transfer Function . . . 87
4.4 Partial Fractional Expansion . . . 88
4.4.1 Matching coefficients . . . 88
4.4.2 *Lagrange*'s method: residues . . . 89

II Digital Control Systems **90**

5 Digital control systems **91**
5.1 Reference block diagram . . . 92
5.2 Equivalent block diagram . . . 93
5.2.1 Considerations . . . 94
5.3 Closed loop Transfer Function . . . 94
5.4 Response to disturbance . . . 95
5.5 Proportional Controller . . . 96
5.6 Root Locus . . . 99
5.7 Transient specifications . . . 103
5.7.1 Peak time . . . 105
5.7.2 Overshoot . . . 106
5.7.3 Settling Time . . . 106
5.7.4 Applying specifications . . . 107
5.8 Sampling Transformation . . . 107
5.8.1 Settling time . . . 109
5.8.2 Peak time . . . 110
5.8.3 overshoot . . . 110
5.8.4 Applying specifications . . . 111
5.9 Internal Model Principle . . . 113
5.10 Static error . . . 115
5.10.1 Tracking a step, $N = 0, M = 1$ . . . 116
5.10.2 Tracking a ramp, $N = 1, M = 2$ . . . 116
5.10.3 Tracking a parabola, $N = 2, M = 3$ . . . 117

5.10.4 Case $M - N > 1$ . . . 118
5.11 Controller synthesis: example . . . 120
5.12 Standard Controller . . . 121
5.12.1 Proportional action . . . 123
5.12.2 Integrative action . . . 123
5.12.3 Proportional - Integrative action . . . 124
5.12.4 Derivative action . . . 124
5.12.5 Proportional - Integrative - Derivative action . . . 125
5.13 PID Calibration . . . 126
5.13.1 Open loop . . . 126
5.13.2 Closed loop . . . 127
5.14 Controller Discretization . . . 130
5.14.1 Forward rectangle . . . 132
5.14.2 Backward rectangle . . . 133
5.14.3 Bilinear transformation . . . 133
5.15 Selection of sampling time . . . 134
5.16 Direct Synthesis . . . 136
5.16.1 Application restrictions . . . 137
5.16.2 Example . . . 138
5.17 Dead-beat controller . . . 140
5.18 Two degrees of freedom pole placement control . . . 142

III Exercise **145**

6 Exercise **146**
6.1 Exercise . . . 146
6.2 Rotary Actuator Control System . . . 148
6.2.1 System dynamic equations . . . 148
6.2.2 Transfer function . . . 149
6.2.3 Digital control system design . . . 150
6.2.4 Controller performance evaluation . . . 151
6.2.5 Testing the system . . . 151

IV Appendix **155**

A Matrix **156**
A.1 Inverse of a Matrix . . . 156
A.2 Eigenvalues . . . 156
A.3 Diagonal matrix . . . 157
A.4 Power of a matrix . . . 157
A.5 Solutions of a linear system . . . 158

B Fourier's transform **160**
B.1 Hermetian symmetry . . . 160
B.2 Frequency shift . . . 161

C Z Transform **162**
C.1 Partial fractional expansion . . . 162
C.1.1 Example . . . 163
C.2 Not causal system . . . 164
